Purpose Of Survey

The purpSurvType code is a concatenation of three separate codes. Each enumeration item is a specific meaningful permutation (order matters) of the three codes, and not all permutations are allowed. The format is a two-letter code followed by two three-letter codes.

The first code relates to the process, or "phase" of the project that requires approval, and therefore a specific submission. The second code relates to the general lot or land type. This is not the parcelType, but it is close. The third is the "survey" type, which categorizes a survey approach for specific purposes.

purpSurvType	Lot Type	Job Type	Examples				
LNLNDLAM	Land Lot	Land Allocation for Ministries	Land Allocation for Ministries (includes Stat Boards) 1) Notification of Title Survey for Allocation of State Land to MCCV 2) Allocated to MOE for
