

# SG LandXML for Land Surveyors

**Soon Kean Huat**

[soon\\_kean\\_huat@sla.gov.sg](mailto:soon_kean_huat@sla.gov.sg)

22/24/26 January 2018

**Training Room, SLA**

# Objectives

The course aims to

- equip participants with deeper understanding about SG LandXML
- describe the enumeration lists
- inform participants the required information for different submission types
- train participants to rectify textual errors returned from the Portal (hands-on)
- assess the understanding of participants in SG LandXML

# Basic Principles

- The course does not teach you to create SG LandXML by hand from scratch. SG LandXML should be created by software.
- It is not advisable to edit observation data (e.g. traverse) in SG LandXML. The data should be converted directly from software.
- The details presented here may not be exclusive. Refer to the SG LandXML Specification at the SLA website for further details. If discrepancies occur between the slides and the specification, the slides shall supersede.
- The slides are subject to change. Please rest assured the change will be minimal if any.

# Lecture Content

- LandXML Overview
- Plan Info, JOB and SVY in SG LandXML
- Enumeration Lists for  
`<CGPoint>`,`<Monument>`,`<Parcel>`,`<ReducedObservation>`
- Airspace, Subterranean, Elevation, and other elements
- Occupational Details and Encroachment
- Required Information in Different Submission Types
  - Land – LN, AC, RT and CP
  - Refinement
  - Control Points – Horizontal and Vertical
  - Strata – SN, SA and ST

# XML (eXtensible Markup Language)

- it is a markup language, meaning it can mark sections with descriptive labels (e.g. person, address, phone)

```
<?xml version="1.0"?>
<person>
    <address>55 Newton Road</address>
    <phone>123456</phone>
</person>
```

sections

- it is an extensible language, as it can add unlimited number of sections (e.g. address, phone, NRIC, ....)

```
<?xml version="1.0"?>
<person>
    <address>55 Newton Road</address>
    <phone>123456</phone>
    ...
    ...
</person>
```

extensible

# Benefits of XML

- it is extensible and editable;
- it is an International Open Standard, thus not dependent on certain vendor;
- can be open by any text editors, e.g. Wordpad, NotePad, web browsers;
- easily translated into different formats;
- readable by humans and machines, thus understanding your data more closely and easily
- relatively smaller in file size

# XML -> LandXML

- an open data exchange for land development and transportation industries
- it is a XML format that is used to store land-related information, such as traverse, parcel, surveyor details
- supported by vendors such as Autodesk, Bentley, Trimble, Topcon, Leica
- was developed in July 2002
- a national standard in Australia and New Zealand for cadastral surveyors to submit their survey jobs. Based on the submission in LandXML, computer systems are able to process cadastral jobs automatically
- SG LandXML software is locally supported by Dai (from AGEO), GPSLands and Listech Neo (with Leica Singapore)

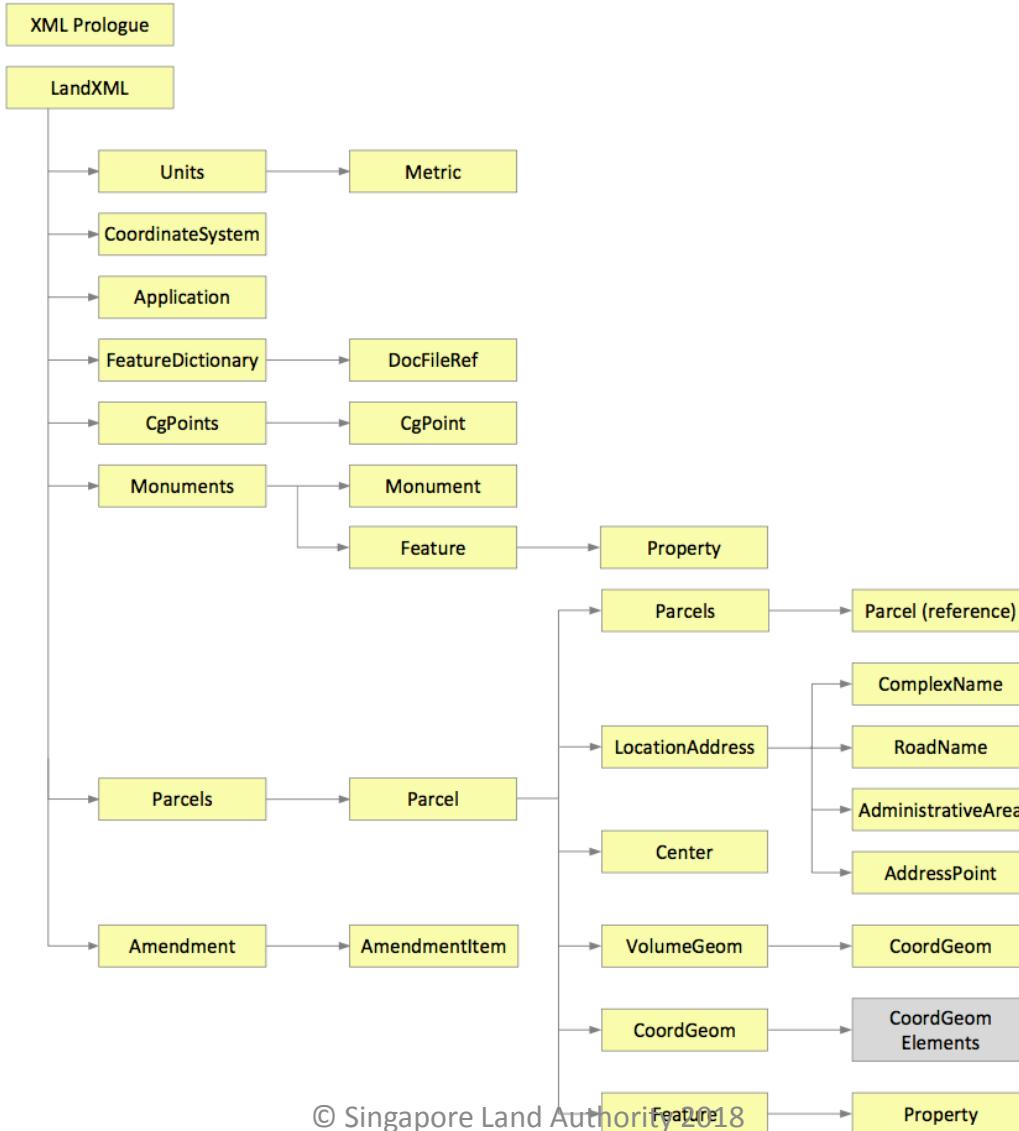

# Government Agencies that support LandXML

- Australia - Intergovernmental Committee for Surveying and Mapping (ICSM)  
<http://icsm-eplan.govspace.gov.au>
- British Columbia, Canada
- New Zealand - Land Information NZ's LandOnline.  
<http://www.landonline.govt.nz>
- Singapore - Singapore Land Authority
- US Federal Highway Administration, US Environment Protection Agency, US Army Corp of Engineers

# Airspace and Subterranean

# Airspace and Subterranean Lots

In the case of airspace and subterranean lots where there are multiple levels, Feature@name="Part Lot" should be added with "TotalArea"=total area of all part lots

```
<Parcel name="MK05-70002K-PT1" area="2000.0" ...>
  ...
  <Feature name="PartLot">
    <Property label="TotalArea" value="3000.0"/>
  </Feature>
</Parcel>
<Parcel name="MK05-70002K-PT2" area="1000.0" ...>
  ...
</Parcel>
<Parcel name="MK05-70002K-GE" area="2445.6" ...>
  ...
</Parcel>
```

For airspace and subterranean scenarios, elevations are required

```
<SurveyHeader>
...
<Feature name="Elevations">
  <Property label="level 1" value="9.5"/>
  <Property label="level 2" value="13.5"/>
  <Property label="level 3" value="17.34"/>
  <Property label="level 3 false ceiling" value="19.0"/>
  <Property label="level 4" value="19.34"/>
</Feature>
</SurveyHeader>
```

# Alteration of Survey District

```
<Parcel parcelType="surveyDistrict" name="MK10" class="final" parcelFormat="standard">  
....  
</Parcel>
```

```
<Parcel parcelType="surveyDistrict" name="MK05" class="parent" parcelFormat="standard">  
....  
</Parcel>
```

Other Elements:  
Lineage,  
physicalRelation,  
FieldNote,  
Balance,  
OldFormat,  
SurveyType,  
Annotation,  
Reference Plan,  
SurveyorCertificate,  
PurposeOfSurvey

# <SurveyHeader>/Feature@name="Lineage"/ Property@label="lineage"

Process	Value
Subdivision	P1=P2+P3
Amalgamation	P1+P2=P3
Alteration	P1=P2
Verification	P1=P1
Allocation	NEW=P1

- Should follow the sequence of process. E.g. Subdivision then amalgamation: “P1=P2+P3; P2+P3+P4=P5”
- Child lots on the right of the equation

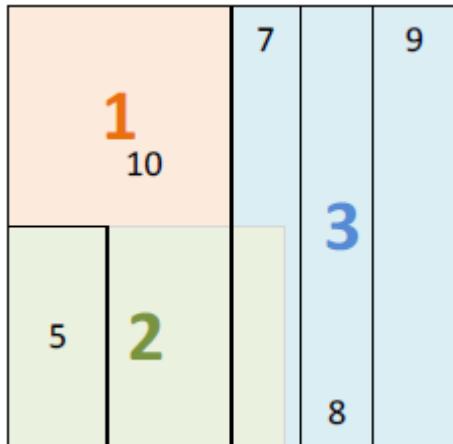

## Example: Subdivision Case

Lot	Here Subdivided Into Lots
MK28-07412N	MK28-07436P, MK28-07437T

```
<Feature name="Lineage">
    <Property label="lineage" value="MK28-07412N=MK28-07436P+MK28-07437T"/>
</Feature>
```

# <SurveyHeader>/Feature@name="Lineage"/ Property@label="physicalRelation"

The physical relation is defined as the child lot is on the left side and the parent lot is on the right side.

Parent Lots = Lot1, Lot2, Lot3

Child Lots = Lot5, Lot7, Lot8, Lot9, Lot10

Physical relation = Lot10=Lot1+Lot2; Lot7=Lot2+Lot3;  
Lot5=Lot2; Lot8=Lot3; Lot9=Lot3

## Example: lineage vs. physicalRelation

```

<Feature name="Lineage">
  <Property label="lineage"
    value="MK28-07412N=MK28-07437T+MK28-07436P" />
  <Property label="physicalRelation"
    value="MK28-07437T=MK28-07412N;MK28-07436P=MK28-07412N" />
</Feature>
```

# <Parcel>/Feature@name=Balance, @name=OldFormat, @name=SurveyType

```
<Feature name="Balance">
  <Property label="isBalanceLot" value="Y"/>
</Feature>
```

```
<Feature name="SurveyType">
  <Property label="code" value="resurvey"/>
</Feature>
```

Feature@name = "SurveyType"	surveyTypeType		resurvey substandard modern	resurveyed substandard survey modern survey
-----------------------------	----------------	--	-----------------------------------	---

```
<Feature name="OldFormat">
  <Property label="oldFormatLotNumber" value="4287/U71"/>
</Feature>
```

## Example for Balance Lot

```
<Parcel name="MK05-09320V" desc="CP90024" area="966.4" class="final"
parcelFormat="standard" parcelType="land">
  <CoordGeom>
    <Line>
      <Start pntRef="111" />
      <End pntRef="110" />
    </Line>
    <Line>
      <Start pntRef="110" />
      <End pntRef="107" />
    </Line>
    <Line>
      <Start pntRef="107" />
      <End pntRef="106" />
    </Line>
    <Line>
      <Start pntRef="106" />
      <End pntRef="111" />
    </Line>
  </CoordGeom>
